Thermomass® System Reference List – EUROPE

Office Building - Lens, France, constructed by the Tilt-Up method, utilizing the foundation to cast the panels. After the panels have hardened a crane is used to lift the panels into place, saving time and transport costs.

Residential Building - Lens, France, also constructed using the Tilt-Up method, showing how flexibility of design can be combined with practical requirements.

Latteria Soresina - Italy, a cooperative which produces grana padano, provolone cheeses and butter, built using the Thermomass System to benefit from the speedy construction and obtaining a functional yet attractive façade.

Fistaş Factory, Turkey, where precast hollow core spandrel Thermomass panels were used to create a safe, strong, yet slender and elegant building envelope in an earthquake region.

Residential Building - Bursa, Turkey, 550 m² of the Megablock System for double walls using Thermomass connectors. A wonderful example of how modern design and concrete can work together to make a beautiful building.
